Proposed Project Title:

PHONEBOOK MANAGEMENT APPLICATION

Abstract:

*Phonebook is a simple C mini-project that will teach you the fundamentals of functions, file handling, and data structure. This program will show you how to add, list, change, edit, search, and remove data from and into a file.

*Personal information, such as name, gender, identity, phone number, nationality, email address and address, is required to add a login to the phonebook. You can then edit, view, search and delete this text.

*The application program has been successfully implemented using experimental cases and the language used – C. C. This application works for other functions that make it easy to search, delete, edit, and remember our peer information.

*Phonebook is developed to manage and access contacts in our day to day life more efficiently.

*It is very user-friendly program designed to streamline the process of creating and managing a comprehensive phonebook.

*This program offers a solution to address the challenges associated with managing an over-expanding network of contacts.

*It is designed in such a way that multiple users can access at the same time.

*The website will use the entered data to query the database for matching products and services.
